SUMMARY

AI-native quality engineer (B.Tech CSE, IIIT Nagpur, 2025) with 2 years of experience testing an Android platform at scale — and, unusually for the role, hands-on experience on both sides of AI quality: testing an embedded LLM assistant in production and building agentic LLM systems (2 shipped agent skills, a RAG memory agent, a multi-provider LLM app). Work daily with AI copilots, agents, and LLM APIs to eliminate toil; script test automation in Python; grey-box debug via logs, traces, and REST API validation in agile CI/CD releases.

TECHNICAL SKILLS

AI-Native Engineering: LLM APIs (Anthropic, OpenAI, Gemini, Groq), AI Agents & Agent Skills, RAG (graph-vector), Prompt Engineering, LLM Output Evaluation, AI-Assisted Development (Claude, Copilot-style workflows)

Languages: Python, JavaScript, Java, SQL, C++ (DSA fundamentals)

Test Automation & Quality: Python Test Scripting, Selenium WebDriver (Python), Automated Smoke/Regression Suites, API Test Automation, Grey-Box Testing, adb (Android), Flakiness & Root-Cause Debugging

CI/CD & Tooling: Jenkins, Git/GitHub, Postman, Fiddler, Charles Proxy, TestRail, Jira, FastAPI, REST/HTTP-JSON

Data & Infra: MySQL, MongoDB, SQLite, LanceDB (vector), Kuzu (graph), Supabase, BigQuery, Linux

EXPERIENCE

Now.gg (BlueStacks)

May 2024 – Present

QA Engineer

Bengaluru, India

- Built the automated Python smoke test suite for BlueAI, an LLM assistant embedded in the App Player, and drove per-release evaluation of agent responses for accuracy, hallucinations, and prompt regressions — directly testing AI in production.
- Owned E2E quality of features spanning client, cloud API, and CDN teams — from PRD analysis and test design in TestRail through defect resolution and verified deployment on production.
- Eliminated defects at the root by deep-dive grey-box debugging across application logs, adb, and network traces (Fiddler, Charles Proxy), and by validating REST API contracts in Postman — including zero-regression sign-off of a Python-to-Rust backend migration.
- Ran automated and manual regression cycles in Jenkins-driven CI/CD releases for an Android platform used by millions, providing go/no-go quality inputs to stakeholders each release.
- Shipped 2 production AI agent skills on the BlueAI platform (blue-shield, deal-keeper), owning design, prompt engineering, Python/SQLite implementation, and on-platform validation — reducing LLM-call overhead via a zero-LLM triage pipeline with opt-in deep verification.

DNote

Sep 2025 – Oct 2025

Software Developer Intern

Remote

- Owned backend validation of service data workflows ahead of production, debugging data-consistency issues; built an internal dashboard (React.js, Node.js/Express, Supabase) end to end.

AI & AUTOMATION PROJECTS

Recall — Agentic Job-Hunt Memory Agent | *Python, FastAPI, Cognee, RAG*

2026

- Architected an agentic memory system on a hybrid graph-vector RAG layer spanning 3 datastores (SQLite + LanceDB + Kuzu), with ingestion/retrieval pipelines for memory-grounded autonomous reasoning and a one-line switch between self-hosted and cloud back ends.

TL;DW — Provider-Agnostic LLM Summarizer (Open Source) | *Python, FastAPI, JavaScript, LLM APIs*

2026

- Built an LLM application supporting 4 model providers behind one BYOK interface, with automatic transcript-source fallback for resilient, non-blocking ingestion of long-form content.

BlueDeck — Developer Debugging & Testing Dashboard | *1st Place, OpenClaw Hackathon (BlueStacks)*

2025

- Won 1st place among company-wide teams by building a dashboard that streamlines debugging and testing workflows into a single developer productivity tool.

EDUCATION

Indian Institute of Information Technology, Nagpur

2021 – 2025

B.Tech in Computer Science and Engineering

Nagpur, India

CERTIFICATIONS & ACHIEVEMENTS

- NVIDIA DLI Certifications: Deep Learning, AI for Anomaly Detection, NLP
- NPTEL “Programming in Java” — 90% (Top 2%)
- Core Member, Google Developer Student Club (GDSC), IIIT Nagpur (2022–23)
